| Pentium(R) D rumpe1: For multimedia issues, this page has useful information: - See also - But please use free formats if you can: OerHeks, my apologies. I have to be afk for a moment. please wait for me it looks like it is coming from the new upstream version of nvidia-prime (331.20+really.331.19) How do I add the sudo command in the '"$home/$usr/bin/terminator.desktop"'statement? I just want to be able to use sudo and terminal. edom: In '$home' make sure you put a $. edom: '$home/$usr/bin/terminator.desktop' edom, use "sudo -i -u username... " or: Bashing-om, where do i find this "$home" thing? edom: Where your home directory is. for "home" type../home/>. edom: But you are probably better off running'sudo -i' as per OerHeks. edom, your /home/ > OerHeks, is it enough to just type the first command? edom, try it, who knows. who knows what happens, as it is 3am here OerHeks, it didn't work, but i am the only user, so I think its not that big of a problem. hi, i have just installed 14.04 and can't use the internet, how do i fix that? 82157476af
